MINDBRIDGE AI

Lean Canvas • IBM Bob Final Project • SDG 3: Good Health and Well-being

PROBLEM

• Student stress, anxiety, loneliness and pressure can go unsupported.
• Stigma and uncertainty can delay asking for help.
Alternatives: search, social media, generic wellness apps.

SOLUTION

• Mood check-ins.
• Supportive guided chat.
• Breathing, grounding and journaling tools.
• Trusted-person/professio nal signposting.

UNIQUE VALUE PROPOSITION

A student-friendly wellbeing companion that helps users pause, reflect and find a practical next step—without diagnosing or replacing professional care.

UNFAIR ADVANTAGE

Campus-oriented design, transparent safety boundaries, a locally curated support directory and feedback-led improvement.

CUSTOMER SEGMENTS

Primary: college students and young adults.
Early adopters: exam-stressed students, student clubs and campus counsellors.

KEY METRICS

• Check-ins completed.
• Weekly returning users.
• Coping exercise completion.
• User-rated helpfulness.
• Support-resource views.

CHANNELS

• Campus clubs and orientations.
• Counsellor referrals.
• Student portals.
• Workshops and QR posters.

COST STRUCTURE

• Build and hosting.
• Content and counsellor review.
• Privacy/security assessment.
• Accessibility and user testing.

REVENUE / SUSTAINABILITY

• College pilots or institutional subscription.
• CSR and wellbeing grants.
• Keep core student support free; only use privacy-preserving aggregate metrics.

KEY ASSUMPTIONS TO TEST

• Students find check-ins easy.
• Suggestions feel useful, not clinical.
• Safety resources are clear.
• Campus partners will support a pilot.

Prototype boundary: Rule-based demonstration only; not a clinical system. No diagnosis, treatment claims, or default storage of chat messages. Review with qualified professionals before any real-world use.
